In this table, breeds are ordered according to their endangerment, assessed by the global index (the breeds with lower global indices are more endangered). Here is a description of the indices

- **GI:** refers to the generation interval (in this case, the average age of dams that gave birth to an animal in the last year)
- **Pedig index:** mean inbreeding coefficient over the last GI and effective population size
- **Introg index:** mean introgression over the last GI
- **Geog index:** radius of circle containing 75% of animals centered in the centre of mass (km) for animals born within the last GI
- **BAS index:** Agriculture Sustainability index at the breed level(containing socio-economical and environmental data)
- **Global index:** Global sustainability index; includes the 4 above mentioned indices
